**Genrep Ltd/Ltée partner UTV International introduces:  
RT-03 TranZTrack Tracked Digger Derrick**

New for 2012 this powerful tracked vehicle is designed to save you time and money. With a ground pressure of only 3 PSI it will allow you to move through and work in ditches, hills, swamps, or snow. The RT-03 TranZTrack with standard 33" D Dent tracks will climb 45% slopes and navigate side slopes of 30%.

The RT-03 lifts up to 12,000 lbs and has a sheave height of 47' to set 90' utility poles. The standard configuration will dig an 8' hole with a 2 speed automatic kick down 12K auger drive, 20" auger with a digging radius of 18' to 26'. Augers up to 32" in diameter can be stored automatically. Fine auger drive control provides for anchor setting in all conditions. Continuous rotation is standard.

The 175 HP FPT (Fiat Powertrain Technologies) N67 series Turbocharged Diesel engine has 568 ft-lbs torque @ 1250 RPM with a standard 90 amp alternator (optional 120 amp), a block heater, an air intake pre-heater and a secondary fuel filter with water separator. The FPT engine is a Tier 3 rated mechanical fuel injected engine and is distributed by Genrep Ltd/Ltée. This engine permits the TranZTrack digger-derrick to easily transport up to four poles at up to 6.5 miles per hour or tow a cable trailer behind the vehicle.

The UTV International TranZTrack supports a hydraulic tools outlet on the deck as well as a pole puller and a grounding reel. Available options include different types of augers, insulated booms, winches and climate-controlled cabs.

UTV International also offers many different models of tracked vehicles for snow, swamps, hills and all kinds of rough terrain. UTV International can also design a special tracked vehicle for your specific needs.
